Sunnyside Gold wins environmental award

The American Exploration and Mining Association (AEMA) has recognized SGC's successful remediation and reclamation in the Silverton Caldera with its Environmental Excellence Award.

This award is made annually to a company or operation that best exemplifies AEMA's Statement of Environmental Principles.

As noted by AEMA, SGC's reclamation "has stood the test of time" and "continues to be effective" with "comprehensive analysis of new data show[ing] that there has been dramatic improvement in Animas River water quality, confirming the success of SGC's bulkheading and remediation."
